#### PROYECTO EMPRESA FTR TRENES C.A.

Elaborado por:

Franco Gavidia Diego Cumares

# Tabla de Contenido

| Distribución de los hosts                              |    |
|--|----|
| VLSM de la red   | 3  |
| Tabla de expansión de dispositivos router e interfaces | 5  |
| Tabla de interconexión de routers                      | 7  |
| Distribución de dispositivos por red.                  | 11 |
| Tabla de servidores.                                   | 13 |
| Protocolo de enrutamiento.                             | 13 |
| Convención de diseño para la telefonía.                | 14 |
| Tabla de asignación de números a dispositivos.         | 14 |
| Tabla de dial-peer.                                    | 16 |
| Configuración Frame-Relay                              | 16 |
| Tabla y configuración de correos.                      | 16 |
| Restricciones de redes inalámbricas.                   | 17 |

### **Proyecto Redes III FTR Trenes C.A**

La empresa FTR Trenes, pide culminar el proyecto de la red de 3 de sus estaciones y su oficina principal. Para comenzar el proyecto se dio un Packet Tracer, donde se encuentran todos los avances de la red hasta al momento.

La dirección IP sobre la cual se trabajará es: 192.74.64.0/18

La topología a implementar se distribuye en 5 sectores importantes: la oficina principal, la estación central, la estación norte y la estación sur y el servicio ISP. Dicho esto, primero se realizará un VLSM MACRO para poder sacar las direcciones de red de cada sector, luego se hará los VLSM de cada subred, para dividir las direcciones de cada subsector.

#### Distribución de los hosts.

| Sector           | Subsector                    | # Hosts | # Hosts 2 <sup>n</sup> |
|------------------|------------------------------|---------|------------------------|
|                  | Red Inalámbrica              | 301     | 510                    |
|                  | Red de Oficinas de Seguridad | 8       | 14                     |
|                  | Red de Control de Trenes     | 8       | 14                     |
|                  | Red de Boletería             | 7       | 14                     |
|                  | Red de Atención al Cliente   | 6       | 6                      |
| Estación Central | Red de Granja de Servidores  | 3       | 6                      |
|                  | Red dns/http                 | 2       | 2                      |

### Protocolo de enrutamiento.

El protocolo de enrutamiento que se realizó fue el protocolo OSPF, ID del proceso 31, teniendo Estación Central y Oficina Principal como áreas de backbone ó área 0, Estación Sur como área 1 y Estación Norte como área 2.

#### Convención de diseño para la telefonía.

Para la distribución de la red telefónica implementamos una convención de diseño de la siguiente manera: **ABC** 

A: Identifica el sector principal donde se encuentre el dispositivo.

Estación central: 1
Estación sur: 2
Estación norte: 3
Oficina principal: 4

**B:** Identifica el subsector en donde se encuentre el dispositivo.

Control de trenes: 1
Atención al cliente: 2
Oficinas de seguridad: 3
Oficina de control central: 4

C: Identifica el número particular del teléfono.

#### Ejemplo ilustrativo:

El sexto teléfono de control de trenes de la estación sur: 216

#### Tabla de asignación de números a dispositivos.

| Estación Central      |                                       |        |                  |  |  |

| RN6              | RS4              | 19          |
| RN6              | RS6              | 20          |
| RS4              | RS6              | 21          |

#### Configuración Frame-Relay.

Se realizará entre el router 0, router 1 y router 3, por consiguiente, la conexión es de 3 seriales, por ende, se debe configurar 2 DLCI por cada router y establecer la conexión entre ellos.

| Router  | Puerto de conexión en el<br>frame-relay | DLCI |
|---------|---|------|
| Router0 | Se1                                     | 200  |
|         |   | 210  |
| Router1 | Se0                                     | 100  |
|         |   | 110  |
| Router3 | Se3                                     | 300  |
|         |   | 310  |

### Tabla y configuración de correos.

#### Restricciones de redes inalámbricas.

Las restricciones de los dispositivos que se van a conectar a la red de trenes con las redes inalámbricas, se realizaron mediante el uso de ACL extendida, la cual permite el acceso de los dispositivos a la red ISP (Proveedor de internet), Servidor DNS/Http (Itinerarios) y servidores de control de todas las estaciones (Horarios y Boletos), por otro lado, se denegó el acceso a los otros servidores como: video seguridad, correos, etc. Los routers inalámbricos ubicados en cada estación son: Router7, RouterN7 y RouterS7.
